THE JERUSALEM POST

Develop Israel with Israel Bonds

BY barring private cars from a section of Jerusalem's arterial thoroughfare — the busiest part of the city — the authorities have quieted a mounting protest against the city's traffic problems.

The protest, which has been continuing since the city's traffic authorities decided to bar private cars from the section of the city's arterial thoroughfare, has been quieted by the city's traffic authorities.

Khrushchev, E. Bloc Chiefs to UN Session

MOSCOW (AP). — The Soviet Union announced last night that Premier Khrushchev would head a delegation to the U.N. General Assembly opening September 20, and within a few days it was learned that the Government would also send a large number of other officials.

Communist diplomatic sources said that the Foreign Minister of all countries of the Soviet bloc, except China, had held a secret meeting in Bucharest early in August and had decided on the joint attendance of their Government's chief representatives.

Cubans Seize Three Big U.S. Rubber Firms

HAVANA (AP). — The Cuban Government seized the plants of three big U.S. rubber companies yesterday in a new anti-American economic offensive that may reach a peak at a mammoth people's rally today.

In a briefing speech, Mayor Raul Castro, the Prime Minister's younger brother, hinted early yesterday morning that all 600 U.S. firms in Cuba that have escaped nationalization may be taken over. There was speculation that Premier Fidel Castro would announce such action at the rally.

Soviet Planes Said Given To Lumumba

LEOPOLDVILLE. — At least seven Russian planes have flown into Stanleyville and three more were expected yesterday with more supplies for the Lumumba troops, a Government spokesman announced.

Informal sources said these planes, given as gifts, would be used by Premier Lumumba to shift troops to trouble spots, perhaps to oust the Katanga forces. Reports said that Russian markings already had been painted over.

Jordan Taking Bomb Attack to Arab League

AMMAN. — An official source said yesterday that the Jordanian request to obtain from discussions of political matters until its delegation raises "important issues" — believed to refer to Monday's bomb blast in Amman — has been accepted.

The Council's 10th ordinary session opened in Shtura, Lebanon, with delegates standing in one minute's silence to mourn the death of King Hussein, who was killed in the bomb explosion.

Confronted by the need to solve the mounting problem of congestion and unable to budget two of the main culprits, Egged and the taxis, the authorities sought an easier solution: to force the drivers of non-commercial vehicles off Jaffa Road into half-a-dozen side streets.

For many drivers, this will involve embarking on tortuous detours through streets far too narrow to handle the increased traffic. To residents of streets such as Rehov Ramban in the heart of Rehavia, which will handle a large volume of the diverted traffic, this will mean the turning of a quiet residential district into a noisy, dusty, commercial thoroughfare, filled with exhaust fumes.

Persian Deputies Resign En Masse

TEHRAN (AP). — The Mellayoun Party on Thursday night announced the resignation of 104 of its deputies elected to the 200-seat National Assembly in the recent controversial general election.

The party's resignation automatically invalidated the election. Earlier, the opposition Mardum Party, responding to a call by the Shah for all deputies to resign, obliged their ruler by announcing the resignation of its 47 elected members to stand down.

Iraq Bans Islamic Right-Wing Party

BAGHDAD (AP). — Premier Kassem has banned all activities of the right-wing Islamic party, a reliable source reported. Several party leaders have been arrested.

The party founder and chairman, Nuaman Abdul Razzak al-Samarrai, is reported to be in custody. No official announcement of Kassem's action has been made.

The Council's 10th ordinary session opened in Shtura, Lebanon, with delegates standing in one minute's silence to mourn the death of King Hussein, who was killed in the bomb explosion.

Berlin Air Lift For Germans

BERLIN (UPI). — The West German Government announced last night that it will free into the isolated city of West Germany prevented from crossing East Germany.

The Government said that all West German travelers turned back by Communist police at the authorized crossing points will be handed coupons good for airline travel from Berlin to the city's expense.

German Wins 100-m. Dash; Soviets Oust U.S. High Jumper

ROME (AP). — Armin Hary, Germany's blonde blitz, and a pair of Soviet high jumpers humbled the athletic pride of the U.S. at the Olympic track and field events yesterday.

Hary proved himself the world's best sprinter by winning the 100-meter final dash in a heroic lunging finish by America's Dave Sims. Both were timed in 10.4 seconds, which tied Hary's own games record set on Wednesday. Third place went to the British sprinter, Peter Radford.

Petah Tikva Man Murders Mother

PETAH TIKVA. — A 34-year-old man described by the police as being "slightly abnormal" yesterday murdered his 60-year-old mother by crushing her skull with an iron bar and slashing her wrists.

The man, Dov Wisznia, then slashed his own wrists in an attempt at suicide. Police rushed him to the Sharon Hospital. After treatment, he was taken to the local police station, still in a state of shock.

Offer of Sale

2 Lockheed Constellation Aircraft

bearing Israel Registration Numbers 4X-AKA and 4X-AKE together with 4 Spare Engines and certain Spare Parts are offered for sale.

The above Aircraft, Engines and Spare Parts are offered "as is" at their present location at Lod Airport, and the Aircraft will have to be completely scrapped on site.

Only Afro-Asians Can Intercede with UAR

TEL AVIV. — The only pressure which could persuade the UAR to change her attitude towards Israel must come from the Asian and African countries and "not from Washington or Moscow," according to Mr. Pinner Brockway, Labour M.P. and Chairman of the Movement for Colonial Freedom.

The future of the British Commonwealth, he said at the Z.O.A. House, here, he said that the majority of African states, as well as many in Asia, have the greatest appreciation of Israel's efforts to help them and would like to see normal relations established between the two countries.

Nixon's Reference to Lodge At T.O.A. Flayed by Pearson

NEW YORK (AP)—Vice-President Nixon's reference to the late Ambassador Henry Cabot Lodge Jr. in his first press conference in the White House today was flayed by a New York Times editorial.

The editorial, which was the first published since Nixon's inauguration, said that the reference to Lodge was "a curious and unnecessary allusion to a man who was not only a Jew but also a Jew-baiter."

The editorial said that Nixon's reference to Lodge was "a curious and unnecessary allusion to a man who was not only a Jew but also a Jew-baiter."

Over 70 Die in India In Torrential Rain

NEW DELHI (Reuters)—Low-lying areas of the southern Punjab town of Roshak were flooded yesterday after torrential rain, despite all efforts by the Indian army to prevent buildings from being swept away.

Many of the town's 100,000 people have fled. Water has already begun overflowing a seven-foot embankment standing between the rushing waters and the threatened town.

At least 60 people have died, 300 head of cattle have been drowned and widespread damage has been caused by the rain in other areas in the Punjab. Some 4,000 villages have been affected, officials said.

King of Malaya Dead at 62

KUALA LUMPUR (AP)—Sir Hassanudin Abdul Shah King of Malaya died here yesterday, at the age of 62, it was announced.

He passed away on the day which was to have seen his official installation as King.

Sir Hassanudin, the Sultan of Selangor, was elected to the constitutional throne last April on the death of the first paramount ruler.

Research First, Act Later

The leader of the delegation from Thailand to last week's Rabat Conference, Lt. Gen. Phya Salvidhannadit, has served his country in many capacities: a member of one of the oldest and most famous families in the country ("Phya" is a rank equivalent to Earl), a member of the Army with the rank of Lieutenant-General, a personal consultant of the king, and is the Chairman and Director of most scientific bodies in the country. He is also Professor of the Faculty of Engineering at the University of Chulalongkorn.

His manner is grave, but he is likely to think over a question and to weigh all possibilities before delivering a well-considered answer in his soft and polite speech.

Pope Said 'Secretly' Supporting Nixon

PAIRS (Reuters)—The French diplomatic community, Mme. Genevieve Tabouis, said yesterday that the Catholic Church was supporting Mr. Richard Nixon for President of the United States.

Mme. Tabouis, who is the wife of the French ambassador to the United States, said that the Catholic Church was supporting Mr. Nixon for President of the United States.

Washington Is Hard On Negro Diplomats

WASHINGTON (Reuters)—Colour prejudice is turning Washington into a "hardship post" for Negro diplomats, according to a report in the "Washington Post" yesterday.

The newspaper lists four examples of incidents which, it says, "is the kind of treatment that makes State Department officials shudder because it erodes a carefully-devised policy aimed at keeping and keeping friends where the U.S. needs them."

Japanese Students Turn on Dutch

TOKYO (AP)—Japan's Zenkoku University student Federation—the same Communist-led group that made headlines in the recent anti-U.S. violence here—announced Thursday it will demonstrate against the Japanese visit of the Dutch aircraft carrier Karel Doorman.

The 18,000-ton carrier, whose presence in New Guinea waters was mainly responsible for the month's break-off of Indonesia's relations with Holland, was invited by the Japanese Government in connection with the Dutch-Japanese relations anniversary of September 8 and 12.

South Plagued by Poison

Jerusalem Post Reporter BEERSHEVA.—Twenty-six persons required emergency treatment for poisoning last month, one of whom was fatal, in the Beersheva and Ashdod area alone.

This was stated on Wednesday by Dr. Eliezer Melan, Deputy Director of Health at the Ministry of Health in Jerusalem, who came down to Beersheva to look into the situation. There have been other cases of mild poisoning which did not require treatment.

Space Dogs Meet Stiff Qualifications

MOSCOW (Reuters)—The right weight, colour and hair length are among qualifications for Soviet space dogs, according to a report in Thursday's "Pravda" newspaper.

Dr. P. Iakov, a space medicine expert, writes that the dogs must be "strong, healthy, and have a good appetite."

Where to go

Government Tourist Corp. Meet the Israeli

Many Israelis come to our office to offer home hospitality to visitors from foreign countries.

If you would like to accept the Israeli family with interests similar to yours, drop in at our office to see the phone and they'll do the rest.

Border Echoes

It was seen moving quietly in and from the square outside the Jerusalem Old City's Damascus Gate, and the usual small crowds of people could be clearly seen from the Israeli side of the border. It was early afternoon last Monday, only some three hours after Jordan's Prime Minister Hussein's al-Majidi had been killed by the explosion of a powerful time-bomb which struck the Government centre of Amman, Jordan's capital, some 30 kilometers to the east.

Looking across at the Old City from the roof of the New Dome Building at the top of Sulaiman's Road, one could not spot a single uniform in the streets except for a few Jordanian traffic policemen and several Arab Legionnaires who were at their usual sandbagged outposts along the border. Everything seemed strangely peaceful and calm in the blazing August sun over the grayish-white walls of the Old City, the rocky hillsides beyond.

Remembering developments that followed Jordan's political crisis in the summer of 1958, Israeli police at the Damascus Gate prepared for a possible influx of foreigners from Jordan who might seek refuge in Israel. But King Hussein's firm grasp of the situation prevented further developments, and throughout the week "business remained as usual" at the Gate.

Routine Affairs
Israeli and Jordan representatives held their routine meetings this week at the headquarters of the Mixed Armistice Commission, and on Tuesday, only a day after Majidi's assassination, a special convoy was sent to the Hebron University buildings was permitted to go up to Mt. Scopus as had been previously arranged. Even so, Arab militancy from Jordan was returned that day according to an earlier agreement, as if nothing had happened in the Hashemite Kingdom.

Although the Israel Defense Forces maintained their vigilance along Israel's eastern border, which is her longest, but also the quietest of all, no further reports of particular alarm came from trouble Jordan.

As the news of the bomb explosion reached Israel, the Prime Minister and the Foreign Minister held on-the-spot consultations with their political, defense and Arab experts, but diplomatic circles in the Israeli capital were extremely careful not to introduce any "Israel angle" into this inter-Arab dispute. It appeared that the Jordanian political situation was not under any acute threat, Israel was not expected to intervene in the affairs of her closest eastern neighbor.

ISRAEL'S WEEK

The Glory Lingers

THERE was general agreement among the delegates of African and Asian states as well as the eminent scientists who had come to the International Conference on Science in the Advancement of New States and who returned home this week, that its deliberations had justified its initial purpose, as a forum at which scientists and scientists of the older, more developed lands would get to know each other's problems, requirements and world outlook.

The tragedy of an air crash near Dakar this week, a crash that killed a number of scientists, was a sad reminder of the dangers of air travel. The crash occurred on the flight from Dakar to Paris, and the victims included several prominent scientists. The incident has led to renewed calls for improved air safety measures.

Cautious Hopes

LOCAL geologists and other scientists, cautious ever since they pooled their talents in an initial outburst of jubilation optimism in '58, did not hesitate to qualify the discovery of oil at Negbe. The discovery, which was announced last week, is a significant step forward for Israel's economy, but it is not without its challenges.

In effect, the drilling, though not commercially exploitable at present, appears to present the key to a new oil field. Better still, it is the first concrete evidence in favor of earlier optimistic surveys, subscribed to by the majority of local geologists and summarized by the International expert, Professor Kenneth Landis in his 1958 U.N. Technical Assistance Programme report.

THE TECHNOCRAT TO THE FORE

By Sorey Shapiro

THE Bright Young Man of Israel, 1958, is a Technocrat. He believes that everything depends on planning, on the use of scientific methods, on the application of technology to solve problems.

There was a time in Israel when the technocrat was the hero. He was the one who could bring order to chaos, who could turn a barren landscape into a thriving one. But now, as the challenges of the world grow more complex, the technocrat's role is being questioned.

THE MIDDLE EAST SCENE

By Amnon Barter

Hussein Weathers The Storm

FOR a few hours on Monday this week, when a certain confusion in news agency dispatches and the broadcasts of Beirut Radio, which reported the fall of the Jordanian Cabinet, had been cleared up, it was clear that the storm had passed.

Mr. Hussein was once again the center of attention. He had weathered the storm of political upheaval and emerged stronger. His leadership was being tested, but he had proven himself capable of handling the crisis.

Cross-Examination

AN important debate between the Ministry of Commerce and Industry was triggered off by last month's publication of the Tensha Report, which criticized the government's economic policy.

The debate centered on the issue of inflation and the government's response to it. Critics argued that the government's policies were exacerbating the problem, while supporters defended the government's actions.

Spirit of The Law

ISRAEL'S Chief Rabbi, chosen by an electoral college, at of whom 70 members are nominated by the various Jewish communities, is now facing a series of challenges.

The challenges include issues of religious authority, community relations, and the role of the rabbinate in a modern state. The Chief Rabbi is expected to navigate these challenges with wisdom and leadership.

Raw Material Production Starts Industrial Chain-Reaction

By Y. ARDON

Jerusalem Post Reporter

THE rise in Israel's use of plastic products has been relatively rapid, though it still lags far behind that of Europe. In 1957, the 200 tons of polyethylene (familiar as a packaging material under the false name of "nylon") were used. Last year the figure was 1,000 tons. The sales of several other types of plastic doubled and are still rising.

At present most of the plastic moulding powders, the penultimate stage of the material before it is shaped into a consumer commodity, are imported at relatively high prices. Today's small consumption would hardly justify the setting up of primary plants because of the considerable fixed costs that must be spread over a large output before they become economic.

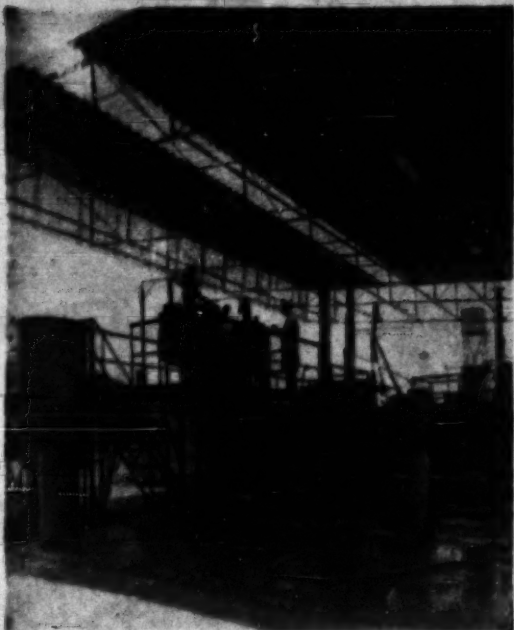

But conditions are not static. Consumption here is kept low as a result of the high customs duty on the raw materials and again a stiff purchase tax on the finished article. If the raw materials were made here, customs duty would be saved, the cost of the finished article would drop and local consumption would rise to a point where, together with exports, plants of economic minimum size could operate with a reasonable prospect of profit.

Five families of plastics show promise of profitable manufacture here. One is based on a petroleum refining gas called ethylene. It is the parent of polyethylene, the packaging material, and the Government has just approved the erection of two plants in Haifa to turn out these two. One project will be a public, the other a private investment, together totalling nearly \$2m. The smallest plant, which can produce polyethylene at economic cost calls for an output of 4,000 tons a year, one half for the local market, the other for the export. The average European today consumes a kilo of polyethylene a year; the Israeli only half as much, but then he is only a "beginner." Cost accounting in such an industry must be precise, because on the world market the Haifa product will have to compete in quality and price with those of the giant chemical corporations of Europe and the U.S.

The second family whose manufacture here is a good business proposition is polyvinyl chloride, PVC for short. It is made from chlorine and ethylene (or acetylene, another gas) and is used for decorative sheeting, curtains, car fabrics, railway, toys, recording tapes, conveyor belts and many other purposes.

A plant with a projected output of 3,500 tons a year is to be erected by the Electrochemical (Fruitarom) Industries of Acre in partnership with the Government. This company already produces chlorine and will buy ethylene from the Haifa Refinery, which will deliver it by pipeline.

Another group of plastics already made here are the phenolic resins, a gifted family from which sprang some famous sons, notably the laminated materials, of which

Semi-commercial Polyester Plant of Ayalon and Etzioni.

formica and bakelite (both British) are the best known. It is also serves as a glue for plywood makers.

Another raw material for the phenolic group is formaldehyde, best known as a germicide, which will be made by a projected plant at Atlit on a scale that will meet the country's needs for a long time. The third ingredient, phenol, made from benzene (a petrochemical) is also imported.

The polystyrene clan of plastics, derived from styrene, is best known to the housewife through the many kitchen articles made from them. Of the world output of styrene, half is bought by the synthetic rubber industry. World capacity is now in excess of consumption and hence it is sold at something close to production costs so that making it here is not worthwhile. But the subsequent production stages are costly and a manufacturer here stands to gain by setting up a plant for the final production phase (polymerization). The investment for an output of 2,000 tons a year is only \$500,000. And when the plant starts production (and the Treasury will not tax it

out of reach for the low income groups) there will be no kitchen left in Israel without a couple of polystyrene containers, bins and other wares.

Prospect No. 5, polyester, is a tough material if married with glass fibres into the so-called reinforced plastics. It is already made here by two firms, Makhteshim of Beer-sheva, using British know-how, and Ayalon and Etzioni of Haifa, using their own. The prospects are excellent in view of the rapidly increasing use of reinforced polyester for furniture, automobile bodies (Suzuki and Sabra cars), bathtubs, boats, crash helmets, containers, etc. Their chief advantages are strength, lightness, immunity to corrosion and insulating properties.

Once all these plastics are made here, they will do more than relieve the economy of the imports of antecedent materials. They will start a chain reaction towards new manufactures and, perhaps, towards secondary chemical industries. For a country like Israel, which has neither timber nor rich sources of metal ores (magnesium excepted) the plastic age could not have been more timely.

More Pupils for ORT Trade Schools

FOURTY-THREE hundred students will attend ORT's 25 vocational high schools in the 1960-61 school-year. The number of students has grown by about 25 per cent as compared with the previous school-year. Seven hundred will study at the large school in Yad-Eliyahu, as compared with 550 last year. This school has been under so great a pressure from applicants that the ORT management has had to open two additional first grade classes. The first grade classes in the school now number eight. There will be five girl students in one of the electronics classes.

In all the other large ORT centres, including the Netanyahu, Givatayim, Jerusalem and Rehovot schools, the number of students will also increase by 25 per cent or more.

In the Laboratory Assistant School in Ramat Gan, which will move shortly to a large new building erected by the Ramat-Gan Municipality, enrolment will double.

Apprenticeship Centres

ORT is to open two apprenticeship centres in cooperation with the Ministry of Labour and the Noar Haoved. One of these will be situated in Jaffa and the second in the ORT School near the Memorial Club in Jerusalem. A thousand apprentices will be trained in these two centres groups of 25. Once a week each group will be given an eight-hour day of trade theory and general studies. A plan exists whereby practical work will be added to the studies in these centres under the guidance of certified instructors one evening a week.

Weizmann Institute Laboratories

Many Industries Benefit From Research Projects

By PHILIP GILLON

Jerusalem Post Reporter

THE moving finger writes, and, having writ, moves on," declared Omar Khayyam, apparently with more poetry than accuracy, since the finger itself cannot not write but had to wield a quill or some other instrument. Modern plastics have vindicated the poet, however: it is now possible to write with the finger-nail or a splinter of wood or anything else available on paper made pressure-sensitive with a special plastic coating.

This use of plastics has been known in many lands for several years. The paper is used in medicine for recording such as electrocardiograms or in meteorology or in seismology in the automatic noting of charts. Until now, however, the sensitized paper used suffered from two major defects. A great deal of pressure was necessary to make a stroke, as much as a writer uses when handling a pen; this pressure was sometimes beyond the instrument. Secondly, water caused harmful smudging. It is possible to type on the matter with a ribbon or without.

The process perfected in the Plastics Research Laboratory of the Weizmann Institute of Science is free from both these defects. It picks up a firm stroke from the light touch of a finger-nail. It can be inked in water or petrol without retaining a sign when dry. The paper is also of great use for copying when it is desirable to dispense with carbon or black-coated paper such as aeroplane companies use for their tickets, which leave an indelible impression on the shirts of travellers on the trip down to their minds.

Research on this plastic coating for paper was initiated at the request of a local industrial firm. Patents have been applied for. This is an interesting example of applied research in the Plastics Laboratory. Another instance of what is being achieved is the making of a Micro-elasto-viscometer for medical use. This fascinating "gadget" is capable of measuring fluids within 0.02 of a cubic centimetre. It is a joint creation of the Plastics Laboratory and the Electronics Department of the Institute and is being used by local specialists and by the University of Birmingham.

This fascinating "gadget" is capable of measuring fluids within 0.02 of a cubic centimetre. It is a joint creation of the Plastics Laboratory and the Electronics Department of the Institute and is being used by local specialists and by the University of Birmingham.

Consultant to Industry

The laboratory operates within the Department of Polymer Research under Professor Aharon Katzir (Katchalsky), who recently returned from a seminar in Moscow and is widely recognized as one of the world's leaders in his field. Dr. David Vofsi is in direct charge of the laboratory which undertakes both long-term research and short-term projects. Mr. Gassner is the technician. The Laboratory serves as a consultant to industry in Israel and abroad apart from undertaking its own activities. In recent months a survey was conducted of Kelit, the plywood factory at Atkum, and a report and recommendations presented on a

plastic-making installation now being erected. The productivity Institute applied to the Laboratory for an investigation of plastic flooring and the Israel Mining Industries has used its help in designing a pilot plant for the recovery of bromine.

Other exciting research which will affect the daily lives of Israelis is that on the impregnation of glass with unsaturated polyesters. This increases the strength of the fibreglass without detracting from its light weight. The next project is to develop a strong, light and transparent or non-transparent as the customer's fancy may require. It can be used for car, boat, furniture or any other human need. Polyester resins for six basic applications were developed. A triple agreement was made with Makhteshim Chemical Works of Beer-sheva and the famous British firm of Scott-Bader for pooling "know-how" and royalties.

Another somewhat bizarre development is that of plastic conditioners for hair. The conditioner is based on urea-formaldehyde resins and its effectiveness has already been proved in field tests on two types of hair. The hair is treated with a solution of the conditioner. With least it was at least as effective as a well-known brand of normal conditioner and with sand it was more effective. The conditioner is cheap (a quarter of the cost of the normal product) and contains nitrogen as a plant food.

Success in Adhesives

One of the most important of all the Laboratory's projects is the development of new and improved routes for the synthesis of monomers suitable for synthetic resins. When this research is concluded the results may prove to be of vast importance to the plastics industry.

A short-term investigation which met with success was the development of a polymerization recipe for an emulsion suitable for P.V.A. adhesives. This has been used already by a local industrial firm with striking results. The Laboratory was set up at full strength in 1955 as a joint project of the Weizmann Institute and the United States Operations Mission, which contributed substantial sums towards it. Its success is one of the most pleasing instances of applied research in the country. How the polymers and other products of the laboratory would be used in the future, the Founder of the Institute, who thought of all the time of ways of changing the nature of things, should be able to predict. The Laboratory is a man from substances available in abundance but less useful in their natural state. At first sight it seems to be a far cry from Dr. Weizmann turning chestnuts and grain into acetone at the Nicolson gas distilleries and the first acetone of the day turning out revolutionary plastics in their modern laboratory. In reality, of course, this is one case where history abounds in success and we happily consent.

Rehovot's Pioneer Plastic Plant Seen Entering New 'Boom' Stage

By Our Economic Correspondent

THE manufacture of plastics is an industry that is obviously ideal for a country like Israel, with a limited supply of raw materials but a large number of highly skilled scientists and technologists. The main impression one obtains at the Rehovot Plastics Chemicals Corporation Ltd. at Rehovot is that the factory is short of labour. With 100 men working three shifts around the clock and a new building already insufficient for the company's needs, it is now entering the "boom" stage.

Its latest plastic product is a new lamination of jute with paper by means of PVC (Polyvinyl Chloride). These bags combine the advantages of jute and plastic-coated paper; the inner lining of paper creates a most impressive and surprising effect. The sacks can be used for granulated material such as chemicals and in fact a trial order for 100,000 metres has already been received from the local chemical industry. The bags are almost 100 per cent waterproof.

Serafion was founded by the Palestine Economic Corporation in 1949. It is interesting to note that it was set up in Rehovot at the personal request of the late Eliezer Kaplan, first Minister of Finance, because Rehovot was an "undeveloped area." The company suffered from various difficulties for many years, but at the beginning of 1959 it reached the "break-even point" and has been operating at a profit ever since. The present capital investment amounts to \$11.5m. From the point of view of "know-how," also, the company is able to manage now without outside help.

Lightening Burden of Housekeeping

By BEN DALRY

ARRANGEMENTS have just been concluded to manufacture containers in this country by means of the Engel Patent, which will make possible an increase in the size of plastic bottles and tanks from 25 litres to 5,000. Furthermore, the process makes it easier to manufacture plastic to specification quickly and cheaply.

Perhaps the most exciting of these new containers for the people of Israel is a plastic milk can coated with a special material. Anybody who ever worked with the standard milk can in an Israeli stable will appreciate the vistas of delight made possible by a can that is light to lift, comfortable to handle and easy to wash.

Other new lines that the firm is introducing to lighten the burden of housekeeping in Israel are jerrycans in three sizes—five, 10 and 20 litres—equipped with special devices for allowing air to enter and with suitable nozzles.

The Yarkon Company with its Y trade mark was the first firm to introduce durable plastic cups and saucers to compete with crockery. It now turns out a wide range of kitchenware, including several types of glasses which

are markedly superior to previous efforts and retain heat or cold without carrying any taste of the plastic. The firm produces bottles of every size and shape for medicine and industry.

The company is planning a large-scale expansion programme which will introduce a further 20 new models of plastic goods to Israel. At present it employs 70 workers, but the number will be increased as a result of the new schemes to 100. The floor space of the factory, which is situated in the North Tel Aviv Industrial Zone near the Ramat Gan Stadium, is to be increased from 1,000 metres to 1,500.

While Yarkon uses several types of plastic raw material, it relies for the most part on polyethylene imported from the U.S. and Europe. Some export markets have been established in Japan and Turkey; if the new programme attains the expected success it will be followed by an intensive foreign sales drive.

The coating department treats textiles and paper with polyvinyl chloride. This is applied to curtains, heavy duty

bus and car upholstery, rain-coats, cinema-seats, table-covers, floats, and almost anything that the customer can suggest. A sub-department working with plastisol is now devising some cunning new-style dolls and other toys.

Notwithstanding very heavy competition from abroad, the firm earned \$100,000 from exports last year and expects to improve on this figure to a very marked extent during the current period. The machinery is not the very latest in use but is still in excellent condition. With the knowledge and organization developed over the last two years, in particular, Serafion makes a most pleasing impression on the visitor, with its yards kept spot and spick and its labour force working quietly but at rapid tempo. The laboratory seems to be particularly good, and the firm is full of new ideas which should event off in dollars in the very near future.

Local consumption has risen steadily and the firm points out that many of its local purchasers do earn dollars by exporting finished plastic articles.

The second department is a polymerization plant which produces dispersions based on polyvinyl acetate. These have a wide range of applications, such as adhesives, carpenter's glue, stoving agents for the textile industry and plastic starches for the high steam laundries. They also manufacture copolymers, which combine the good properties of several polymers. Some excellent new outdoor paints have been made by this method and several of Serafion's clients have won new export markets with copolymers. A new reactor finished three months ago helped considerably to expand production, but the two reactors are already working to full capacity.

The coating department treats textiles and paper with polyvinyl chloride. This is applied to curtains, heavy duty

Automatic Floor Mat

The traditional door mat made of vegetable fibres will soon be replaced by a new device: the electric mat that thoroughly cleans your dusty or muddy shoes.

It is made of an aluminium grill mounted on rubber and built into the floor in the doorway. When a pair of feet steps on the mat, an electric motor automatically sets in operation nylon filament brushes which sweep up and round through the grill at several hundred strokes a minute. Tests have shown the new product to be durable and cheap to operate; and it cleans the sole of shoes with exceptional efficiency.

The new invention will be useful in laboratories and clinics where cleanliness is vital, but will no doubt be widely purchased for private homes. The household returning from a hard day's work will simply stand up at the threshold for a few minutes—the mat will do the rest.

Large Vats For Chemicals

A NEWLY-acquired machine, the highest of its type in Israel, has made it possible for another plastics manufacturer as well to embark on a sizeable expansion programme.

Goods weighing up to three kilos can now be turned out by the firm of Super-Plast in their Petah Tikva plant, making it possible to manufacture products that have never been made in Israel before. Among these will be jute vats of up to 30 litres, and storage tanks in which chemicals will be protected from corrosive action.

The ten-year-old firm, which manufactures household utensils, industrial parts and building and packing equipment, employs 40 workers and expects to expand its payroll. On the production lines just now are a variety of rigid, brittle, breakable and non-breakable wares, from glue jars and food containers to lampshades and mixer and refrigerator parts. Export contracts have been made as well, the firm states.

Everything has been accounted for in the modern YARKON factory

- MADE OF HIGH QUALITY PLASTIC
- AIR VALVE
- CONVENIENT GRIP
- SPECIAL SPOUT FOR YOUR CONVENIENCE
- FOR ALL PURPOSES
- UP TO A TEMPERATURE OF 100°C

YARKON PLASTIC PRODUCTS LTD.
MANUFACTURERS OF "YARKON" LTD.

Plastics processors in Israel have, virtually on their doorstep, one of the 44 associated companies that, throughout the world, represent Imperial Chemical Industries Ltd., Britain's leading chemical enterprise.

And I.C.I. offers the Israel plastics industry the widest range of plastics materials marketed by any single company—"Alkathene", for example—I.C.I.'s brand of polythene—"Fluon" (polytetrafluoroethylene), "Maranyl" (nylon), "Perspex" (polymethyl methacrylate), "Corvic" (polyvinyl chloride), "Butakon" butadiene copolymers, "Mouldrite" (urea formaldehyde moulding powders), and others.

Talking of plastics...

These products, which enjoy a worldwide reputation among processors for high quality and excellent performance, are available to the Israel plastics industry through Imperial Chemical Industries (Israel) Ltd., either from stocks held in the country or from the United Kingdom.

I.C.I. manufactures many thousands of chemical and allied products—drugs and dyestuffs, fibres and fertilisers, paints and plastics. To find out more about I.C.I.'s production for many industries, send for free copies of the booklet "The Greatest Name in British Chemicals."

REVIEWING RESTITUTION FUND USES

Editor, The Jerusalem Post
Mr.—The article entitled "Restitution Payments to Germany" in your issue of Friday, August 5, was most timely and instructive but calls for certain corrections.

Your correspondent states that the early trend was for restitution recipients to "put a respectable part of the money aside in liquid holdings" but that... last year the situation started to deteriorate (as far as the economic planners were concerned).

Recent figures of the Bank of Israel go to show that not only is there no tendency to spend, but that the trend of saving is gaining momentum. Restitution payments may now be being hoarded in foreign exchange (Marks or dollars) in the so-called Tamam or Pasak accounts created mainly for that purpose.

Bank of Israel figures for Deposits of the Public—Time Deposits in Foreign Currency show that those amounted at the end of January 1959 to \$23,618,000 (calculated at 4.5 dollars) and at the end of 1959 to \$70,504,000; and at the end of the first quarter of this year to no less than \$96,900,000 and not \$25,000,000 as your correspondent states.

This is a most astonishing rate of saving and the economic planners have every reason to be pleased with the public's saving-mindedness at the restitution recipients.

These savings earn an interest of six per cent per annum. Your correspondent errs in saying that "it is unclear whether income tax is payable on such interest." The Treasury has expressly stated that it is subject to income tax.

If Tamam deposits are kept in German Marks, they are subject to German taxation and are thus really inflation-proof. The situation is less favourable for Pasak accounts in marks or dollars, which are subject to devaluation.

ISRAEL'S MUSICAL SEASON

By Yehoshua Bookin

THE Israel Symphony Orchestra, which has been in existence for a number of years, is now in the process of reorganizing itself. The orchestra is now in the process of reorganizing itself, and is now in the process of reorganizing itself.

Now, at the end of the season, Michael Taub is trying to put his ensemble back into shape, and—provided he gets the necessary funds—will be preparing a new season in which he hopes to offer some selected programmes. It is planned to embark on a tour of the country through several European countries. Sufficient bookings seem to be at hand, but Mr. Taub will only go abroad if the necessary funds can be obtained.

The Israel National Opera, which has been in existence for a number of years, is now in the process of reorganizing itself. The opera is now in the process of reorganizing itself, and is now in the process of reorganizing itself.

Harmonica player John Sebastian, who has been in existence for a number of years, is now in the process of reorganizing himself. The harmonica player is now in the process of reorganizing himself, and is now in the process of reorganizing himself.

New Grounds for Divorce In Britain's A.I.D. Report

By Dr. "Observer"
Special Correspondent

LONDON.—A judge in Edinburgh ruled two years ago that a wife who had given birth to a child in consequence of artificial insemination with the seed of a man who was not her husband was not committed adultery. That decision set in train a lively discussion in Britain, and the Government, faced with a strong plea to legalize the subject, did what all British Governments do when confronted with a ticklish social problem. It appointed a committee which it hoped would report in such a way that no legislation of the artificial insemination but a major character would be required.

The committee has been faithful to its task. The recommendations are sparse and where controversy existed in public opinion the committee has itself divided by seven to two.

While the committee has said that surgically the topic is of minimal social significance, the guess is 200 births a year, the majority has concluded that it is not in the interests of society that A.I.D. (Artificial Insemination by Donor) should be practiced; and, in fact, it should be discouraged. But they hasten to add that there should be no legal prohibition against A.I.D. The committee thinks that the offence created by the criminal law would be very difficult to detect and might drive the practice into disreputable hands, rather than the same way that the law relating to abortion does.

They add that A.I.D. should remain in the realm of legal "therapies" that is, the individual should be free to indulge in the practice without interference from the law but that society should voice its view that the practice is neither harmless nor justifiable.

The two dissenters (one of whom is Mrs. Peggy Jay, the wife of a prominent Labour M.P. and a former junior Minister in the Attlee Government) object strongly to this depreciation of the practice of A.I.D. They regard the practice as just another method whereby man has learnt to control his own fertility. They are not in

favour of the practice, but properly engaged in small numbers of cases, provided that both applicants and donors are carefully and properly selected, they say it is unobjectionable.

The major recommendation of a positive character looks as if some new ground is to be broken in English law. The committee says that a new ground of divorce should be introduced whenever A.I.D. is practiced without the husband's consent. There is no dissent from this because all these doctors who at present engage in this form of medical practice ensure that husbands are merely consent to the artificial insemination but are consulted at every stage of the medical treatment.

The major controversy that emerges from the report comes out of a negative recommendation of the majority. The recommendation is that "there should be no amendment of the laws relating to legitimacy."

English law a child born from A.I.D. would be illegitimate. The two dissenters in their report make a fundamental question of legitimacy. They say that they would welcome a change in the law whereby

children accepted as one of the family by the husband would be legitimate. They adopt the view of a lawyer witness, who said that a society that tolerated the practice of A.I.D. had a duty to protect the interests of the resultant children.

Not all the committee's attention was turned on the results of the practice of A.I.D. The effect of the practice upon the donor of the sperm, and his marital relationship, were considered. While there is a feeling that the relationship of married couples might be adversely affected if the husband sows his seed without his wife's consent, nevertheless the committee would not like to see the law give the wife the right in such circumstances to petition for divorce.

The report, which took evidence from all parts of the world, largely confirms the view of the majority in Britain, that it is a sign of the times. In Britain a few years ago the subject of A.I.D. was left to be discussed directly in private. Now, first with the report on homosexuality and prostitution, and then on A.I.D., these matters get a thorough airing in public.

The total visual effect is devastating. It is no longer unusual for me to be seeing spots. But then I learned that my dash-dot exercise was in vain: I picked up a newspaper and—proof of the vowels were just not there.

Hebrew—they say—is the language of brevity; and, from, to, in are not separate words. They are lonely letters that cling like jungle vines to words you barely managed to learn.

Then with the report on homosexuality and prostitution, and then on A.I.D., these matters get a thorough airing in public.

Lots of Autumn Fabrics

By Shanti Berlyne

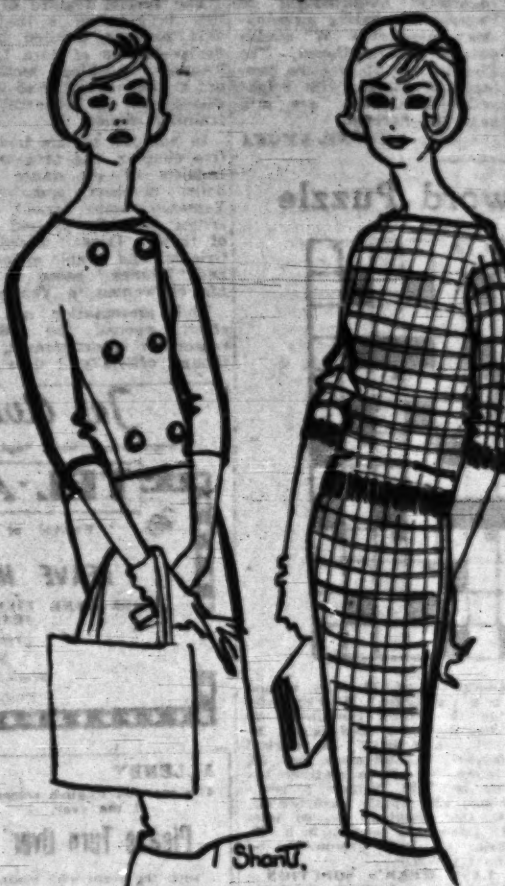

THE between-seasons gap is comfortably bridged by a wide range of suitable materials despite the brevity of Israel's autumn.

Lightweight autumn cloth now available includes a heavy cotton flannel, suitable for both trousers and suits as well as some very fine imported cashmere prints. Heavily-textured bouclé-wool, attractive and hard-wearing, is on sale in all colours including black and white, while the terylene range features various tartans as well as

solid colours. Heavyweight artificial rayon in Poodle checks, man-made-wool in check patterns are also available and can easily be run up by the amateur dressmaker.

Those who believe that "there is no substitute for wool" will welcome the soft lightweight fabrics and classical tweeds now appearing in the stores.

If money is no object, cotton or silk velvets, suitable mainly for evening wear, are also obtainable in the droppers.

Our illustration shows, right: an easily-made fringed jumper suit in lightweight tweed. Left: a collarless, double-breasted suit for more advanced dressmakers.

Campaign Frocks Come from Texas

By E. Carpenter

WASHINGTON.—A TEXAS store will supply the official ladies' campaign uniforms for both the Democrats and the Republicans. But both parties have chosen Texas red-blooded, non-partisan campaign colours of red, white and blue, for the upcoming political season.

Miss Charlotte Newman, representing Neiman-Marcus of Houston and Dallas, made the presentations in Washington which were accepted this week by the Nixon and Kennedy organizations. Each camp was given four different designs to choose from, for outfitting their lady workers.

The doorbell ringers for the Kennedy camp will wear blue flannel blouses with a white flannel blazer piped in royal blue. The blazer has brass buttons and a three-quarter length sleeve. They will wear a red felt roller hat with two royal blue streamers, one reading "Kennedy" and the other "Johnson."

The ladies working for the Nixon camp will wear a white skirt, either sheath or pleated, and a Yachtman

blue jacket with white pearl buttons. The Nixon "head-dress" will be a red belt with red, white and blue gros-grain ribbon trimming and a large bow. The Nixon button. High fashion pointed pumps and a red calf drawstring shoulder strap bag complete the ensemble.

The costume which is now designated as the "Official" Campaign uniform can be ordered from Neiman's, macy's and Saks, and is expected to cost \$30.

LOUISE CASSELLMAN, 1000 La Salle Street, Ottawa 1, Ontario, Canada, is looking for English-speaking girls aged 18-25 as pen friends.

Diary of A Housewife

By Madeline Hal Haim

BEING confined to the limits of the house and garden all summer because I begin to feel that my children are getting narrow. Great things are going on outside which I have no chance to take part in or even observe. Beg my brother to let me in on the activity in his government office, would like a behind-the-scenes glimpse of policy-making, maybe, or a peep into the working of the great mind.

BROTHER says well nothing much happened today really. It was just about average. This morning when he arrived at 7:30 he was summoned to a section meeting, himself, three colleagues and the boss. Most important decision was announced. For the past two weeks four of them had occupied one room — small. One of them will now move to a desk from a smaller room, but co-operating part of the office will move in. The boss is very pleased. As a result of this transfer one of the "managers" of the office will be able to work completely as it is some time since he played musical chairs.

At eight o'clock sharp the A move was triggered off. Brother's desk — which had been his for a week, was removed to make room for the new arrival who is bringing his own small one with him. Soon however a totally different man came in saying that the first man has swapped desks and he would come instead with his desk. His desk is rather larger as he has a slightly higher grade. He also brought a desk on which he leans when he isn't working. He was followed by two workers carrying their cupboard and four boxes pushing an enormous chest full of equipment.

THE boss arrived at this point, took one look and he had been bewildered. He was followed by the man who should have come, who felt quite happy. He said his room, twice the size of this one, now had only the two small desks and was very airy. His substitute said nothing but rushed backward and forward, bringing more equipment. In fact the room was round the walls, some on the floor against chairs, on window-sills, wherever there is an empty space. Brother made himself as small as possible in case he was carried out with other surplus and offered no suggestions, merely taking the door off and putting it on again to facilitate the passage.

Doesn't that checked to see that nothing had been given in writing, then suggested that the old arrangement be adhered to. Number One was against this. Then he suggested that Number Two man could leave some of his furniture behind in his old room which was not so very far away. For a moment Number Two man was paralyzed at the effrontery of this remark, then denounced it with a passion reminiscent of the U.A.R. on Israeli rights in Suez. Sworn poured down his face. He was declaratory, sarcastic and loud. Offer and counter-offer, rejoinder and counter-rejoinder shook the room with their volume.

NUMBER Two did not cease in his moving to defend his rights. He tugged and heaved, pushed and pulled and shoved. The elevator was reached when at last an angry jerk his desk to the working one — collapsed. As it was by this time one o'clock every one went out to lunch, and then, as it was Friday, went home.

BROTHER says nothing much will happen now till Sunday when the director will come and order everything to be taken back. It is just an average office, he says. Quiet and uneventful.

FOR the second Rosh Hashana raising, wicker fingers of residents in Malten-EDC Homes for Aged are busy crocheting 500 "Yarmulkes" for Israel's defense forces. Last year's Ministry of Defense order for 1,000 of the cotton and wool blue and white skull caps was successfully executed by the clubsters and delivered in record time.

Stitch in seventy seven from the Old Age Homes and Infirmary are busy at this job (each manages to finish 3 in one day) which is being done in their own free time — besides their daily chores. More important than the payment for their work is their feeling of usefulness and close association with the soldiers of Israel. Many of the Malten Homes have adopted neighbouring army units and it is not uncommon for them to think of these young men and women as their grandchildren.

DOCTOR'S TOOTHBRUSHES NEED RESTYLING

By Dr. Eliahu Yarom

BRUSHING one's teeth, if not after every meal, at least twice a day, is an ingrained habit for most of us: the result of years of training by our long-suffering parents. Of course, there are some people who don't bother. Their teeth show the "yellow film" of bacteria as beloved of the toothpaste advertiser and earn our critical contempt.

Apart from this surface appearance, there are any evidence that constant brushing does reduce the amount of dental decay? There is, but not much.

The kind of toothbrush we use today has hardly changed its shape and design during the past 120 years. In Paris in 1853, there appeared Dr. Maury's "Complete Treatise on the Dental Art" in which he showed pictures of almost every kind of toothbrush on the market today, although some of these have been re-invented during the past 50 years. It is generally accepted that proper brushing, with most kinds of toothbrush, will remove tooth film and keep the gums healthy.

But the function is as much for the gums as for the teeth and the brush has on occasion been renamed a "mouthbrush."

To prevent dental caries we would have to carry out the drill recommended by our dentist at least four times a day — up and down movements — between the teeth, using a brush with bristles

Network of Religious Kindergartens

Jerusalem Post Reporter

THE network of Kindergartens and Day Nurseries run by Beit Ya'acov have a twofold function: to provide the 3,000 children attending them with the best possible care; and to implant in them, or to further develop, an orthodox way of life.

Mr. Arye Goldkorn, director of the network, emphasizes the role the 23 kindergartens and seven day nurseries play in offsetting missionary activities, especially in the slum quarters. Few range from nothing to IL12 a month, with the average monthly payment being IL4 or IL5. Some children are given free meals if their parents' financial circumstances warrant this; these and others get free clothes from time to time. The majority of the kindergartens are in Jerusalem.

About one-third of the children "graduates" each year into elementary school. The overwhelming majority are enrolled in the Independent Trend run by Agudat Yisrael.

What we really need, of course, is for someone to find a simple way of preventing dental caries without all this bother.

Many dentists and manufacturers have been concerned with this inability of the average toothbrushing to have much effect and Dr. Archer and his colleagues of London have recently produced some new designs. One is a toothbrush with a collapsible handle containing the toothpaste which is forced between the bristles during use. Another is a portable brush in a round case which carries a supply of toothpaste and which is thrown away when the toothpaste is exhausted. The most original design is a toothbrush without bristles which connects to the bathroom tap and acts like a miniature shower bath for the teeth. A small stock of detergent can be incorporated in the handle.

Battling with Hebrew

THIS is a blow by blow description of my baffling encounters with the art of reading printed Hebrew. My teacher told me that reading Hebrew was like reading Chinese, because the Hebrew language has only 22 letters. But has it? No sooner has the weary but triumphant student arrived at the last of the 22 letters, than he discovers — unadvertised, unannounced, unbid for — five extras. You can tell them from the other 22 because they are extra long, and — by way of excuse — they are suffixed with the word "sofit," which means that they are to be counted. But I count 27 letters of the alphabet.

And now observe the F that precedes into so F, the Kaf that coughs itself into a Khaf (both available with a sofit) and the Bet which is sometimes a Vet. (By now I count 30 letters.)

Cross your T and hope to die, but you won't know whether the T is a Tav or a Tet. And is Kh, the guttural "ch" which I cannot pronounce and which is everywhere around me — is it Khet or Khaf? And is V my old friend the Vet or the thing that means the Yav? Sometimes in a sleepless night when I count letters, I wonder if I count correctly. I wonder if I count correctly. I wonder if I count correctly.

Down with the Tav, the Kaf and the Khaf (or if you prefer, the Vet, the Khet and the Khaf). Give the underprivileged vowels their rightful place in the society of letters — but let them stay vowels proudly and permanently. Purge their ranks of impostors like the Kh which forever will be only a consonant, and let the Vav stand up and be counted only as a vowel. Then the dots will be no more and the dashes will vanish.

Admittedly, my Sobru husband is shocked at my suggestion. He says it proves that I don't understand the character and spirit of Hebrew, the logic and nature of its grammar, or the mechanism of its word making. (He also says that I'm not original.)

Desserts Off the Apple Tree

By Molly Bar-David

IF you are lucky enough to have an apple tree in your back yard, you'll find after the first harvest that you don't want to eat raw apples so readily any more.

In which case, here are some of the many ways in which we used to use apples in Canada (where they are almost as plentiful and as cheap as potatoes). Apples take on an absolutely different taste when raw, cooked, baked, glazed or with different dressings.

Waldorf Salad

The truly traditional Waldorf salad is made up of sliced apples dipped in lemon juice, chopped celery, chopped walnuts and mayonnaise usually mixed with whipped cream. But Waldorfs are as varied as hotels by that name. You can add grated cabbage, and use pears instead of walnuts, and add sour cream to the mayonnaise. But the combination of apples and dried celery stalks is something special. Make these two ingredients the bulk of your salad. Serve built on lettuce leaves.

Apple Brown Betty

This was the standard dessert in Canada, for it is just as delicious cold as hot, and keeps for days.

1 cup apples, 1 cup cubed fresh bread, 1 cup softened butter or margarine, 1 cup sugar (brown is best), 1 tsp. cinnamon, 1 egg (beaten), 1 cup juice of 1 lemon, 1/2 cup hot water.

Peel and slice the apples. Mix crumbs with margarine. Arrange fruit and bread in layers in a baking dish, and sprinkle each layer with cinnamon. Top layer should be bread. Mix juice, 2nd. with water and pour into side of dish. Bake for 30 minutes until top is crusty.

Apple Pie

We used to have this dessert hot with a piece of yellow cheese on the side, or cold, topped with vanilla ice cream. Make this pie rather deep because after all it is apples and not crust that is the key to this dish.

1 cup flour, 1/2 cup sugar, 1/2 cup butter, 1/2 cup apples, 1/2 cup juice of 1 lemon, 1/2 cup hot water.
